there is a higher likelihood of finding support for a .NET-based API for customizing the user interface and output than with other object-based APIs. ## ObjectARX ObjectARX is the API which makes it possible to access many of the functionality which is possible in AutoCAD without requiring the creation of C++ applications. There are two sets of APIs, one written in C++, one in .NET. The first set is the 'native' API, while the other is based on 'JScript ObjectARX'. ObjectARX is available for both the Windows and Mac operating systems. The ObjectARX.NET is available as a standard component in Visual Studio 2010 or higher. ObjectARX functionality for Windows is enabled by selecting the option to install the ObjectARX Runtime. The ObjectARX.NET API is available for download from the Autodesk Exchange web site (see Appendix B). ## ObjectARX Structures and Functions The ObjectARX API is based on the Structure and Functions classes. The basic structure is shown in Figure 16.3. Figure 16.3 Basic structure of the ObjectARX API ca3bf1094

Using your browser navigate to the Autodesk Autocad home page: Click on 'Download Autocad' and your product key should be under 'Activate Your Product.' Credit: CC0 Public Domain Travellers between North America and Asia will be subject to a much more stringent screening process at U.S. and Canadian airports, if a new amendment to U.S. immigration legislation becomes law. The proposal, which has bipartisan support, would require U.S. Customs and Border Protection to enhance screening of electronic devices larger than a cell phone at all U.S. land, sea and air ports of entry, to ensure travellers are not bringing in potential explosives, money laundering or child pornography. The bill, introduced in the Senate on Tuesday, would also extend the requirement to carriers, and not just airports, for international flights within the U.S. The legislation, if passed, would effectively mirror Australia's import screening procedures for international passengers. That new legislation was passed in December, and has since been debated by Australian parliamentarians. One of the reasons for the Australian government's move is to ensure the integrity of its border protection system. "The United States border with Canada is the busiest land border in the world, and our Homeland Security Investigations (HSI) agents are already investigating more than 7,500 cases a year related to money laundering, child pornography, and child exploitation," said Senator Roy Blunt, the Republican chairman of the Senate Homeland Security Committee. "This amendment would give our agencies additional tools to pursue and disrupt these types of criminal activity." Senator Kirsten Gillibrand, the Democratic ranking member of the Homeland Security and Governmental Affairs Committee, lauded the legislation, saying it would help ensure the U.S. "reaches its full potential as a destination for travel and trade." While many of the risks posed by travellers with large electronic devices are limited to airline passengers, there are many other types of travellers who are also subject to enhanced screening, including those entering through land or sea ports of entry, those using commercial carriers, those flying to the U.S. from the Caribbean or other foreign countries and those flying to North America from Asia. Expanded Enhanced Questionnaire The proposed amendment, which will be debated in the Senate on Tuesday, would require the U.S. Customs and Border Protection to amend its screening procedures

What's New in the AutoCAD?

Manage one or many drawing revisions to import changes you made. If you need to import changes from all your drawing revisions, AutoCAD 2023 allows you to import a “.rev” file (right-click Revisions in the Solution Explorer). Improvements in commands and add-ins: Open an existing drawing or CAD element in a new drawing. AutoCAD 2023 provides the flexibility to directly open an element in the current drawing without having to open a new drawing first (moved from the default toolbar option), or open an element from the folder in which it resides. The existing drawing name option in the Geometry task bar continues to be available, allowing you to automatically name a drawing as you move from one drawing to the next. Split the workspace of the drawing into two or more separate views: Add one or more panes in the Drawing workspace to partition the drawing area into multiple views. Drawing Textures: Create 2D and 3D textures that can be applied to any model. Textures are easy to create and use and can be saved to your system. All-new Cloudworks solutions: Embed your models into your design. Customize your cloud workspace experience to easily design and print in your favorite environment. Interactive cross-layer editing: When you open a drawing, you are now able to move your tools directly into the model you have opened. Click and drag your tools to the drawing you are editing. Access, interact, and navigate over any environment from the ribbon. Quickly navigate to other areas of the design environment using contextual ribbons. Save as: Create a new cloud workspace within a workspace by saving a new drawing. Support for netCDF and geotiffs: NetCDF files can be opened as 2D or 3D, and can include 2D and 3D geotiffs. Models imported from netCDF files can now be assigned a color. Additional geospatial data types: ArcMap ArcMap: Geospatial data. Data sets that have a file geometry and do not have a model can be used in the drawing environment as in a 2D drawing. These data sets can be displayed as polygons, points, lines, and shapes. ArcGIS ArcMap: Geospatial data. Data sets that have a model can be used in the drawing environment as in a 3D drawing
