3.5 MB designed to create a simple bootable disk from USB flash drives. Allowing you to create bootable drives from your USB flash drives to PC, Mac, iPhone, iPad, Android devices and other cell phones. This version is not the latest version but is enough to work for you for now. There is no need to register the program or be accepted. This tool allows you to create bootable disk media from CD/DVD, USB flash drives, memory sticks and other media. You can also restore your Apple Time Machine backups to the drives you own. The program allows you to provide a name to the disk you will be creating, choose the disk partition to be overwritten or just delete the partition to create a complete disk. It supports all the filesystem types supported by the operating system and can convert files or folders into the required types. The created disks can also be compressed or encrypted, and you can choose from some of the most common file extensions. It also features an option that allows you to prepare the USB flash drive for Windows and Mac computers. The program offers a user friendly interface with a simple design and does not allow you to create your disk in less than 5 minutes. It also allows you to create and manage multiple bootable disks. This program is free of charge to use on computers running Windows XP, Windows Vista, Windows 7 or Windows 8 without installation. You can download it here. Yet another collection of interesting free programming tools. The collection includes CPU-Z, which is a high-performance, low-overhead tool for making educated guesses about the hardware inside your computers. When you run the program, it opens a new window where you can get the information about your computer's CPU and Motherboard like things you need to know. There's no setup or installation involved, as the program simply runs and opens its main window, where you can quickly locate your CPU model, speed, and manufacturer. The software provides detailed information and you can use the info to upgrade to the latest BIOS, to see which BIOS version can be used for the motherboard, and other useful stuff. Another tool included in the collection is Gmerlin, which is an open source software that can be used for encrypting your partitions. This program encrypts your Windows NTFS partitions as well as your Linux ext2/ext3/ext4 partitions, while it can also unlock your partitions if they are encrypted. Yet 3a67dfeec
