Photoshop: Getting to Know Photoshop Photoshop is the most powerful of the desktop image-editing programs. It can save, open, edit, save again, and print your images. You can perform many different tasks with a single click or a keystroke. This book explains many of the ins and outs of Photoshop in depth, but let's take a look at some of Photoshop's basic concepts and concepts to get you on your way. Creating, saving, opening, and saving again Creating an image in Photoshop is the process of assembling and arranging images, text, and other graphic elements into a digital file. It can be as simple as a single image or a huge, complex master piece of digital art. For most amateur users, you'll probably use Photoshop Elements (see Chapter 1) for creating and editing. Saving an image in Photoshop is creating a copy of an existing image or digitally creating a new image. Saved images are stored in a file format that's called a format. The most common format is the TIFF (Tagged Image File Format), but you can also save your images in the JPEG, GIF, or PNG formats. Opening a file means opening an image — that is, bringing it into the work area in Photoshop. You can open any saved file type. If you're editing someone else's image, you may need to type the appropriate address into the File Picker dialog box for Windows. Save again is the process of creating a new image from another version of the same image. You can save any new image that you create. Saving again creates a new TIFF or JPEG image that contains all the layers and editing styles that you applied. Photoshop has most of the features that you need for editing images, such as non-destructive editing and layers. You can save your images in TIFF or JPEG format, and you can save a second version of your image as a separate file. But Photoshop's main strength is in many different ways of editing images, not just saving. Many people think of Photoshop as a "destructive" editing program — that is, you edit a file and then you have to save again to make that image permanent. However, some people have very unique tastes and prefer Photoshop's non-destructive edit method. With most programs, you can modify an image and keep a copy of that image in a different format as the original. Creative tools It's essential to understand the

Q: How to pass the part of the string that is not in quotation? I have a string like below. /my/test/path/testfile.txt" It can have multiple lines. I want to access the part of testfile.txt that is not in the quotation mark " How can I do it? A: From simple testing, it seems that it's the file name that starts with a " so you can check that by subbing in first and last characters. Example: def get_string(string): return string[:string.find('"')] >>> get_string("/my/test/path/testfile.txt") 'testfile.txt' >>> get_string("/my/test/path/testfile.txt" * 3) 'testfile.txt' >>> get_string("/my/test/path/testfile.txt" * 3 + '"') 'testfile.txt' Training in Pancreatic Surgery in the United States. Pancreatic surgery is a relatively new specialty in the United States and there are relatively few training programs to address it. Our aim was to identify the status of training programs in pancreatic surgery and the current surgical training curriculum. A standardised questionnaire was used to identify pancreatic surgery training programs in the United States. An internet search was conducted using nationally ranked programs for medical residents and an internet search was conducted using National Residency Matching Program (NRMP) for USMLE Step 1 and Step 2 candidates. Forty pancreatic surgery training programs were identified in 34 states. These included 12 categorical and 32 individual training programs. The majority of programs (28/40, 70%) had only one endoscopist. Eight training programs participated in the NRMP and 11 programs (55%) accepted Step 1 and Step 2 candidates. Thirty-six programs (90%) had a pancreatic surgical division and 36 programs (90%) were institutional in nature. The most common disciplines trained included general surgery, pancreatic surgery and endocrine surgery. Eight programs (20%) had patient volumes of 3-15 per year. Pancreatic surgical training programs in the United States are rare. There is substantial variation in the quality and training options available. There is a need for more detailed standards and guidelines on how to train in this relatively new field.Ossification in a

Are we losing money in the fight for health insurance in the state of Maryland? If we are, our elected leaders should stop fighting about it and fix it. Because when Maryland finally gets universal health care, you won't have to pay for an emergency room visit. (Worse case scenario: At least you won't have to pay for an emergency room visit. Sometimes people die.) For years, we've been fighting what comes out as a "death spiral" in the Maryland health insurance market. In 2014, for example, we saw on average 14,000 Marylanders drop their health insurance plans. And the numbers keep going down. Last year, in the 39th District, just under 1,000 more people dropped their policies. Compare that with a year ago. In 2016, every Marylander in our district is projected to be on Medicaid. According to the Maryland Health Benefits Exchange, in 2016, the exchange signed up just over 500,000 Marylanders for private health care. And yes, Congress is still fighting about whether or not to bring back "HillaryCare" (as it was called in 2009) — which would put Maryland in the same Obamacare-on-steroids swamp that California, New York, Connecticut and Oregon are in. The federal government hasn't implemented or fixed anything in the health insurance marketplace. Meanwhile, in the state of Maryland, as of January 2017, over 1.3 million Marylanders have no health insurance. And yes, that includes many, many who may not know they're uninsured. I'll say it again: Under Obamacare, you will not pay for emergency room visits. We're losing money in the fight for affordable health care. Is it any wonder our politicians don't know what to do? Michael E. Arnoni, a former Republican State Sen. and candidate for the 39th District, is running for Congress again.
